prosperous past of nearly eight years. The July number contains a summary, by the medical editor, of the present status of the question of milk sterilization, concerning the value of which the last word has not yet been said. "Baby's Flannels" forms the subject of another medical paper.

— The new edition of "Chambers's Encyclopædia" is rapidly nearing completion, and with the advent of one more volume this standard reference book will be at the command of all who are desirous of procuring a most accurate, convenient, and useful encyclopædia. The ninth volume has just been issued. Among the more important American articles are found San Francisco, St. Louis, St. Paul, Scandinavian Mythology, Sir Walter Scott, Sewage, Sewing Machine, Shakers, Shakespeare, Shelley, Phil. Sheridan, Sherman, Ship-Building, Silk, Silver, Slang, Soda, South Carolina, Spain, Sugar, Spiritualism, etc. These are all copyrighted, as are also the articles by American authors in all the volumes issued. The maps of this number include Russia, Scotland, South Australia, Spain, and South Carolina, prepared according to the latest geographical surveys. "Chambers's Encyclopædia" is never disappointing, its articles are well up to date, and a large number of entirely new subjects are introduced. The illustrations are incomparably the best ever issued in a work of this character. The volumes contain on an average nearly a thousand pages each. Volume X. will be issued in the fall. J. B. Lippincott Company are the American publishers.

— Messrs. Joseph Baer & Co., booksellers, Frankfort, are selling the botanical library of the late Professor L. Just, director of the botanical garden connected with the Polytechnicum at Carlsruhe. The list includes many important works in various departments of botanical science.

— In 1874 the British Association published a volume of "Notes and Queries on Anthropology," the object being to promote accurate anthropological observation on the part of travellers, and to enable those who were not anthropologists themselves to supply information wanted for the scientific study of anthropology at home. A second edition has long been wanted and a committee was appointed by the British Association to consider and report on the best means for bringing the volume up to the requirements of the present time. The committee recommended that the work should be transferred to the Anthropological Institute, and this proposal was accepted, the Association making grants amounting to £70 to aid in defraying the cost of publication. The new edition has now been issued, according to *Nature*, the editors being Dr. J. G. Garson and Mr. C. H. Read; and everyone who may have occasion to use it will find it thorough and most suggestive. The first part—Anthropography—has been entirely recast; the second part—Ethnography—has been revised, and additional chapters have been written. Among the contributors to the volume are Mr. F. Galton, Mr. A. W. Franks, Dr. E. B. Tylor, General Pitt-Rivers, and many other well-known authorities.

NEO-DARWINISM AND NEO-LAMARCKISM.

By LESTER F. WARD.

Annual address of the President of the Biological Society of Washington delivered Jan. 24, 1891. A historical and critical review of modern scientific thought relative to heredity, and especially to the problem of the transmission of acquired characters. The following are the several heads involved in the discussion: Status of the Problem, Lamarckism, Darwinism, Acquired Characters, Theories of Heredity, Views of Mr. Galton, Teachings of Professor Weismann, A Critique of Weismann, Neo-Darwinism, Neo-Lamarckism, the American "School," Application to the Human Race. In so far as views are expressed they are in the main in line with the general current of American thought, and opposed to the extreme doctrine of the non-transmissibility of acquired characters.

QUERY.

Can any reader of *Science* cite a case of lightning stroke in which the dissipation of a small conductor (one-sixteenth of an inch in diameter, say,) has failed to protect between two horizontal planes passing through its upper and lower ends respectively? Plenty of cases have been found which show that when the conductor is dissipated the building is not injured to the extent explained (for many of these see volumes of Philosophical Transactions at the time when lightning was attracting the attention of the Royal Society), but not an exception is yet known, although this query has been published far and wide among electricians.
